PROFESSIONAL SUMMARY

Aspiring Data Analytics Professional, skilled in leveraging machine learning, geospatial analysis, and real-time data to solve infrastructure and mobility challenges using Python, Tableau, Power BI, and Excel. Proficient in data preprocessing, predictive modeling, and building interactive dashboards. Focused on data-driven planning, scenario simulation, and translating complex datasets into actionable insights for sustainable and scalable solutions.

EDUCATION

Bachelor of Technology (Artificial intelligence)
Rishihood University

2024 - 2028
Grade: Pursuing

Intermediate (Class XII)
Jesus and marry school

2023 - 2024
Grade: 68.0%

Matriculation (Class X)
Sophia sr sec school

2021 - 2022
Grade: 77.0%

PROJECTS

SkyInsight ([Github](#))

April 2026

This project studies airline passenger reviews to answer a practical business question: what does the customer experience look like across airlines, seat classes, and traveller segments, and where should airlines focus first to improve satisfaction and recommendations? The cleaned analysis dataset contains 22,329 passenger reviews across 497 airlines. The final dataset supplied for this report has six business-ready fields: airline name, overall rating, seat type, traveller type, recommendation flag, and rating category.

FlowSync ([Github](#))

March 2026

FlowSync is a Python-based traffic simulation project designed to model and analyze real-world traffic dynamics through a modular and extensible software architecture. At its core, the project focuses on simulating how individual vehicles behave, interact with one another, and respond to traffic control systems such as signals, intersections, and road rules. The goal is to create a flexible framework that not only supports realistic traffic scenarios but also allows developers to easily extend and customize different components of the system.

DiabShield ([Github](#)) ([Demo](#))

February 2026

This project combines a deployed logistic-regression screening model with a guideline-grounded retrieval and language-generation layer. The Streamlit application collects patient health indicators, computes a diabetes risk probability from the shipped model artifacts, extracts salient risk factors, retrieves relevant passages from medical guideline PDFs using FAISS and a CrossEncoder reranker, and produces structured JSON guidance through Gemini with a safe fallback when the API key is unavailable.

CERTIFICATIONS

problem solving Hacker Rank ([Link](#))

July 2025

Demonstrated proficiency in algorithmic thinking and programming fundamentals by successfully solving coding challenges focused on data structures, logic building, and problem-solving efficiency on the HackerRank platform.

SKILLS

Computer Languages: Machine Learning, Python

Data Tools: NumPy

Software Packages: Pandas, Excel, MySQL, MongoDB

Soft Skills: Teamwork

Others: Spreadsheet, Tableau, Analytics, Git and Github, Matplotlib seaborn

EXTRA-CURRICULAR ACTIVITIES

- Lawn Tennis
